AI ON THE RISE · AI SPEND

AI usage keeps climbing. Company spend has stopped.

Ramp data says more tokens, but not more budget.

WHAT HAPPENED

Ramp: token volumes rose while AI spend flatlined

A new Ramp report shows AI spending flatlined over late summer even as token volumes rose. Price cuts from OpenAI and Anthropic, plus customers getting savvier about controlling costs, are part of the explanation.

THE NUMBER

1.5%

Token spend growth across August and September

In July, spend had grown 42% from the previous month.

THE REAL PROBLEM IN COMPANIES

What I see in companies: usage gets counted, value does not

01 Teams track logins and tokens, not whether a workflow got better

02 Budget is approved for the tool, not for a specific use case

03 Nobody owns the question: is this use case worth what it costs?

I'VE ALREADY SOLVED THIS

AskMoses.AI, the SaaS I built end to end and run as a contractor

01 17 organizations in the US signed up. Only 6 actually use it.

02 11 of 17 never activated: onboarding required a CRM and a rubric first.

03 **88% gross margin, plus Script Intelligence: a weekly script from winning calls.**

MY TAKE

Launching is not the same as being used.

Rising usage with flat spend suggests some companies are measuring what AI delivers. In practice, that means tracking adoption and results per use case before scaling the budget. Usage alone is not value.

WANT TO SEE HOW I DID IT?

Comment ADOPTION.

I'll send you the step-by-step of this case by DM. I take AI off the drawing board and put it into production, with measured results.
