AI ON THE RISE · GOOGLE AI MODE

# AI Mode answers harder questions. Does it cite you?

## A smarter Search changes who gets seen, and who gets left out.

WHAT HAPPENED

# Google upgraded Search with Gemini 4, aimed at complex questions

Per TechCrunch, Google calls it its biggest model improvement to Search yet. Multi-part questions, very specific requests and even typos should be handled better, with more visual answers and a wider range of links.

WHAT CHANGES

# What the upgrade changes for your content

01 Search breaks one question into several subqueries (query fan-out)

02 Answers include comparison tables, images and structured responses

03 Google says users will be connected to sites they might have missed

THE REAL PROBLEM IN COMPANIES

# What I see in companies: nobody knows if AI cites them

**01** Content is written for people, not for machines that retrieve and quote it

**02** Teams track rankings and clicks, but not AI crawling or citations

**03** Nobody owns the question: is our brand being read by AI engines?

I'VE ALREADY SOLVED THIS

# One of Brazil's largest cosmetics companies already has this

01 Annual report rebuilt: 3-language server-rendered HTML, JSON-LD, llms.txt, 17 AI crawlers allowed

02 1,427 reads by AI crawlers from 8 engines, plus 553 searches from a real person's question

03 **60 people reached the site by clicking an AI citation, in 15 days of measurement**

MY TAKE

# Measure instead of assuming.

A smarter AI Mode makes citation more valuable, but it doesn't tell you whether you're getting it. In my work, an in-house log collector separates crawling, real questions and citation clicks. Without that split, you are guessing.

WANT TO SEE HOW I DID IT?

# Comment GEO.

I'll send you the step-by-step of this case by DM. I take AI off the drawing board and put it into production, with measured results.
