AI ON THE RISE · AGENTS IN BUSINESS

Google brings agents to Gemini with a focus on businesses

The message is less hype and more real corporate operations

WHAT HAPPENED

Google launched a unified Gemini agent for businesses

According to TechCrunch, the agent receives goals, plans tasks, uses tools, connects internal systems, and delegates work to subagents. Google says it is starting with businesses to tackle the hardest problems in security, scale, and performance.

THE NUMBER

90%

of the Fortune 100 use Gemini Enterprise at work

The statement cited by TechCrunch helps explain the initial focus on the enterprise market

THE REAL PROBLEM IN COMPANIES

What I see in companies when the agent leaves the demo

01 Without identity and permissions, the agent accesses more than it should

02 Without real integration, it responds well but does not do the work

03 Without an auditable trail, no one trusts it when something goes wrong

I HAVE ALREADY SOLVED THIS

I did this in an enterprise account

01 Multi-agent platform in production in an enterprise account

02 US$ 5.5 million account

03 About 60% efficiency gain

MY TAKE

Measure instead of assume.

When the news talks about an agent with its own identity, permissions, subagents, and an audit trail, the core point is governance. In practice, an enterprise agent needs to be built with reliability and outcome measurement from day one. Without that, it looks good in the demo and weak in operations.

WANT TO SEE HOW I DID IT?

Comment AGENTES.

I will send you the case step by step by DM. I take AI off the drawing board and put it into production, with measured results.
