AI ON THE RISE · AI SPEND VISIBILITY

Spending on AI is easy. Knowing what it bought is not.

Anthropic now ships tools to show what token spend delivers.

WHAT HAPPENED

Anthropic launched reporting tools for token spend

Managers can see what a team produced over a date range, what it cost, and where workflows broke down. The reports also recommend improvements. Anthropic is adding pooled group budgets too. TechCrunch calls it a clear attempt to show ROI.

THE NUMBER

10x

Spend growth on agentic coding tools since the start of the year

Jellyfish: now about 2% of total engineering cost. Most CFOs didn't plan for it.

THE REAL PROBLEM IN COMPANIES

What I see in companies: spend is tracked, outcomes are not

01 The bill shows up in finance. The result never shows up anywhere.

02 Teams adopt a tool, but nobody owns the question of what it delivered.

03 Scaling starts before anyone knows if the first workflow paid off.

I'VE ALREADY SOLVED THIS

AskMoses.AI, the SaaS I built end to end and run as a contractor

01 17 organizations in the US signed up. Only 6 actually use it.

02 11 of 17 never activated: onboarding needed a CRM and a rubric before any value.

03 **Script Intelligence mines winning CRM calls into a weekly script. 88% gross margin.**

MY TAKE

Launching is not the same as being used.

A dashboard of tokens spent tells you activity, not value. Tie each AI workflow to a business outcome and measure what it delivers per dollar before you scale it. That is how you tell real adoption from shelfware.

WANT TO SEE HOW I DID IT?

Comment ADOPTION.

I'll send you the step-by-step of this case by DM. I take AI off the drawing board and put it into production, with measured results.
