AI ON THE RISE · PAYOFF GAP

Billions in AI spend. Flat margins outside tech.

The gap is not the model. It is what happens after launch.

WHAT HAPPENED

An economist finds no AI payoff outside the tech sector

Apollo's chief economist says revenue per worker and profit margins are rising for the Mag 7 but flat for the S&P 493. No signs of AI boosting productivity growth. Mainstream companies now see token spending as a cost center.

THE NUMBER

42%

of AI initiatives are ultimately abandoned by their corporate parents

S&P Global Market Intelligence, as cited by TechCrunch.

THE REAL PROBLEM IN COMPANIES

What I see in companies: the pilot works, the workflow doesn't change

01 The pilot runs in a demo, not inside the daily workflow of the team

02 Nobody owns the result, so nobody checks whether the AI is used

03 Success is defined as launched, not as measured impact on revenue or margin

I'VE ALREADY SOLVED THIS

AskMoses.AI, the SaaS I built end to end and run as a contractor

01 17 organizations in the US signed up. Only 6 actually use it.

02 11 of 17 never activated: onboarding required a CRM and a rubric before any value

03 **Script Intelligence mines winning CRM calls into a weekly script, minimum 3 calls per org**

MY TAKE

Launching is not the same as being used.

The source says payoff is missing outside tech. In practice, this suggests the issue is adoption, not model quality. AI pays off when it lands in a real workflow and someone tracks the result. Otherwise it is just a cost line.

WANT TO SEE HOW I DID IT?

Comment ADOPTION.

I'll send you the step-by-step of this case by DM. I take AI off the drawing board and put it into production, with measured results.
