AI ON THE RISE · CHATGPT WALLET

AI agents can now pay. Is yours ready to be trusted with a card?

OpenAI launched ChatGPT Wallet. Approval limits come first.

WHAT HAPPENED

OpenAI launched ChatGPT Wallet for agent purchases

Agents can now complete purchases for the user. Each purchase needs a security check like Face ID, which creates a record. Agents pay with a token, not the real card. Limited rollout to US ChatGPT Pro subscribers.

THE NUMBER

1.2B

people use ChatGPT each week, per OpenAI

Many use it to research products, compare options and decide what to buy.

THE REAL PROBLEM IN COMPANIES

What I see in companies: the agent is the easy part

01 Nobody defines what the agent may do alone and what needs a human approval

02 Actions happen with no trail, so no one can explain a wrong order later

03 The agent goes live and nobody measures how many chats become real orders

I'VE ALREADY SOLVED THIS

A building materials store in southern Brazil, from question to order

01 13,312 products in the ERP, 136 ways of writing the unit, 245 slang synonyms mapped

02 Search answers in milliseconds and hands 8 results to the model, which never sees the catalog

03 **Rules: no made-up specs, never reveals stock, no discounts. 65 of 65 real questions found the product**

MY TAKE

Measure instead of assuming.

An agent that can pay is only useful with approval limits, a trail of every action and a measured conversion rate. Build those before you hand it a card. OpenAI itself says spending limits are still a future step.

WANT TO SEE HOW I DID IT?

Comment SDR.

I'll send you the step-by-step of this case by DM. I take AI off the drawing board and put it into production, with measured results.
