AI ON THE RISE · CRM AGENT BENCHMARK

The AI said it updated the quote. Did it?

A new benchmark measures the gap between saying and doing.

WHAT HAPPENED

A new benchmark tests if agents actually do the work

CRM-Agent-Bench is a paper on Hugging Face. It tests agents on multi-turn business tasks in CRM environments with changing records. Success is strict: every check declared for the task must pass, not just a plausible reply.

THE NUMBER

64-84%

Strict success across sixteen systems tested

From 64.32% to 83.60%. Leading systems diverge sharply in cost and reliability.

THE REAL PROBLEM IN COMPANIES

What I see in companies: nobody checks the doing

01 The demo looks great in chat, so the team assumes it will execute correctly too

02 Business rules live in people's heads, so nobody can test the agent against them

03 When the record is wrong, it surfaces weeks later, in front of a customer

I'VE ALREADY SOLVED THIS

Freedom Marine, a yacht dealer in Canada, needed exact quotes

01 8 boat models in the configurator, with compatibility rules between options

02 Quotes from CAD 334,000 to CAD 1.87 million, exchange rates updated every hour

03 **The quote goes straight into HubSpot, and the sales team maintains it on its own**

MY TAKE

Measure instead of assuming.

An agent that answers well is not one that executes correctly. The only way to trust it in production is to test it against your own rules and count the gap between what it says and what it does. This benchmark makes the same point.

WANT TO SEE HOW I DID IT?

Comment CPQ.

I'll send you the step-by-step of this case by DM. I take AI off the drawing board and put it into production, with measured results.
