TRAINING · WORKSHOP · GEO

Everyone talks about GEO. I measured it.

SEO, GEO, AEO.
No hype. Server logs.

THE PROBLEM

GEO became a buzzword. Almost nobody shows results.

Most people stop at "add structured data". And neither OpenAI nor Google gives you a report on how often you show up in their answers.

The result: everyone promises, nobody proves it.

THE CASE

The annual report of one of Brazil's largest cosmetics companies, rebuilt for AI to read.

01 Real HTML, server-rendered, in 3 languages

02 Schema.org/JSON-LD, llms.txt and 17 AI crawlers invited by name

03 **And most important: a log collector to measure everything**

PROOF #1 · AI READ IT

1,427

reads of the content by AI crawlers

8 different engines · 15 days of measurement · 8,047 requests logged

PROOF #2 · SOMEONE ASKED

553

fetches triggered by a real question

Not a crawl. It's ChatGPT or Claude going to the site the moment a person asked.

PROOF #3 · IT BECAME A VISIT

60

people reached the site by clicking an AI citation

57 from ChatGPT · 113 downloads of the report PDF

WHAT YOU TAKE FROM THE WORKSHOP

The method behind these numbers. Step by step.

01 Content that both AI and people understand: questions, FAQs, tables and an expert voice

02 The technical layer: Schema, llms.txt and robots rules for AI agents

03 **How to measure: separate crawls, real questions and citation clicks**

TRAINING AND WORKSHOPS

GEO with proof, not promises.

For marketing, SEO and content teams. In-company or online.
