AI ON THE RISE · AGENT SUPPLY CHAIN

Your coding agent is only as safe as its extensions

A backdoored Claude Code extension hit the Cursor Marketplace.

WHAT HAPPENED

A tampered Claude Code extension shipped with an SSH backdoor

Phorion detected a backdoor in the Claude Code for VS Code extension on the Cursor Marketplace. Cursor removed versions 2.1.312 and 2.1.313. The payload runs as soon as the file loads, with no user interaction needed.

THE NUMBER

5,000

developer systems impacted, according to Cursor

Figure as reported by DoublePulsar, citing Cursor.

THE REAL PROBLEM IN COMPANIES

What I see in companies adopting coding agents

01 Extensions install and auto-update, and nobody owns the approved list

02 Agents and IDEs run with the full access of the developer's machine

03 Nothing sits between a new tool and production code or credentials

I'VE ALREADY SOLVED THIS

How the AskMoses.AI development team works with agents

01 Every dev works with Claude Code on the project

02 Another Claude reviews the pull request before it moves on

03 The human decides on business grounds, not technical ones

MY TAKE

Launching is not the same as being used.

This also applies to safety. An allowlist, least-privilege access and a review gate only matter if they are enforced every day. A policy nobody follows is not a control. Measure what your agents can reach, instead of assuming.

WANT TO SEE HOW I DID IT?

Comment CLAUDE.

I'll send you the step-by-step of this case by DM. I take AI off the drawing board and put it into production, with measured results.
